

Device Central 3.3

Release Notes – June 2022

Highlights

- **New Android 11 Zebra device support.**

IMPORTANT:

- **Previous installations of Device Central 3.2.1 or lower must be removed before installing Device Central 3.3.** The Device Central .APK is now signed with a new key to provide additional security, requiring uninstallation of the old .APK before installing Device Central 3.3 or higher.

Device Support

- **New device support added in this release:** TC53, WS50 running Android 11.

See [all supported devices](#).

New in Device Central 3.3

- No new features.

Resolved Issues

- SPR-45386 - When scanning a barcode that contains the MAC address of a Bluetooth peripheral, sometimes a message appeared prompting to try again, even though the barcode scanned successfully. This message no longer appears.

Usage Notes

- When in Android Multi-user mode, Device Central supports only the Primary user.
- The scanning profile named "DeviceCentral" in DataWedge is used by Device Central and should not be removed or modified. Otherwise, unexpected behavior may occur.
- Only Zebra Bluetooth scanners are listed in the notification drawer in Android. All other devices are listed only in the Device Central main UI.
- The Device Central application must be installed on the device before being configured with Device Central Manager CSP.
- The Device Central application must be installed and launched at least once on the device to receive Smart Leash alerts.
- The serial number for HS3100 Bluetooth headset may be incorrectly reported.
- When connecting a RS6000 scanner, HS3100 headset or another Bluetooth peripheral device that provides battery information, it may take 10-15 seconds for the battery information to appear.
- Users need to wait 2-3 seconds after launching Device Central for the first time to start scanning a barcode that contains the MAC address of a Bluetooth peripheral.

Known Issues

- On Android 11, the Device Details screen for a connected RS507 scanner displays a limited subset of information: model, manufacturer, device type and MAC address.

About Device Central

Device Central provides a centralized way for an organization to connect and monitor supported Bluetooth peripherals. Using the simple user interface, Device Central easily pairs and unpairs Bluetooth peripherals, monitors connection status, and provides details on supported peripherals. If supported by the peripheral, additional capabilities may exist such as paging the peripheral or updating the firmware.
